

Kumba Backend Internship Assessment

This exercise is to assess your knowledge and skills on API development

Task:

Implement following REST APIs for a user profile.

1. Create User profile
2. Update User profile
3. Get list of all profiles
4. Get a specific user profile
5. Delete an existing profile
6. Create a copy of user profile

User profile fields:

Name	Type
-----	-----
id	String
firstName	String
lastName	String
email	String
phone	String
Address	String

**id field is a 6 digit unique identifier for each profile*

Please try to make your code as modular and extensible as possible. Also, be sure to handle all the errors with necessary logging and document your code in a readme file.

We recommend using Node.js for this assignment as it is part of our tech stack though you are free to use your preference.

For the submission, please upload your code on github and email us the link. Include a readme file with instructions on how to run the code and APIs (including installing dependencies)

If you have any questions, please don't hesitate to ask. Good Luck!
